

# ABBAcime

Ready-to-use product

## ▶ ELIMINATES CEMENT'S EFFLORESCENCE

### ▶ DESTINATION

**ABBAcime** is a ready-to-use product designed to eliminate chalky cement efflorescence, to be used on most surfaces (floors or walls); and can also be used on concrete.

**ABBAcime** allows the surfaces to look clean again by eliminating these white unaesthetic traces.

**ABBAcime** can be easily applied with a brush on a basis of 5 to 8 m<sup>2</sup> per litre.

### ▶ PRESENTATION

**ABBAcime** is a translucent, slightly viscous, aqueous product.

Once applied, **ABBAcime** dissolves the chalky cement efflorescence.

Also, **ABBAcime** is recommended for the cleaning of stones especially the part where they have been sawn as well as the general cleaning of rough concrete surfaces.

### ▶ HOW TO APPLY

**ABBAcime** can easily be applied with a spray, brush or a wet sponge. Make sure that the whole surface has been covered.

Leave **ABBAcime** for about 10 to 15 minutes. The reaction is a visual fizzy action. Rinse off with water and brush if necessary.

Depending on the intensity of the chalky layer, this operation can be repeated 2 to 3 times with a good rinse with water between each application.

Protect all surrounding materials before application.

### ▶ PACKAGING

- 2-litre bottle
- 10-litre bottle
- 25-litre drum
