

ABBA mousses

BIODEGRADABLE
SOLUTION

Ready-to-use product

DOUBLE ACTION : curative and preventive

▶ Against : **MOSSES-ALGAE-LICHENS**

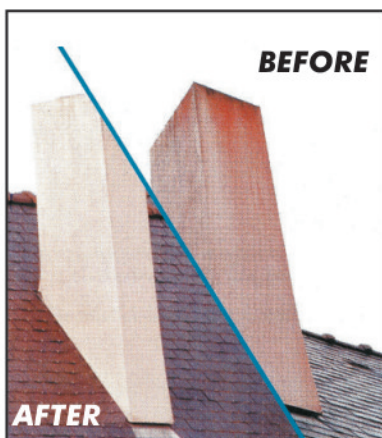

DESTINATION

ABBAmousses is a product designed to keep buildings and their surroundings clean whilst fighting against micro-organisms developing through damp and rain. **ABBAmousses** is based fungicide, bactericide and algacide vegetable-based active principle

ABBAmousses is a product without any risks for the materials (even if applied in great quantity); it is designed to clean and preserve all types of materials used in construction and its surroundings.

ABBAmousses is very easy to use. It has a strong decontaminant action and it is perfectly balanced in its dosage for an optimum and long lasting efficiency.

ABBAmousses can be used on a basis of 1 litre per approximately 5 m², it treats the surfaces onto which it is applied and it leads to a phenomenon of self-cleaning. It protects in time.

PRESENTATION

ABBAmousses is an aqueous product free of aggressive components. It is designed to destroy mosses and lichens growing on most surfaces. It does not present any side effect on the surfaces treated.

ABBAmousses stops the proliferation of these parasite plants which can alter materials. Its favourable characteristics allow for this product to be applied onto most surfaces and materials, even the most sensitive ones such as zinc and aluminium.

In case of accidental projection on window frames or glass, the product can be easily wiped off with a sponge and water.

ABBAmousses contains cleaning components.

It is advised to apply **ABBAmousses** as a decontamination process before painting walls, façades or roofs. It gives the surfaces a better “gripping” power. It prevents the ulterior appearance of blisters and the formation of micro organism underneath the coat of paint.

ABBAmousses can be painted one hour after its application.

APPLICATION FIELD

ABBAmousses does not present any danger for the surfaces and materials onto which it is applied; it can be used on a wide range of materials:

Roofs : tiles, natural slates, painted or unpainted fibre-cement tiles, shingles, bitumen, all types of wood, metallic or translucent tiles, domes, etc...:

Walls : all types of plastering, roughcast, quarry stone, bricks, boarding.

Fencing : wood, metal, plastic...

Others : patios, monuments, conservatories, alleyways, benches, tennis courts...

HOW TO APPLY

ABBAmousses can be easily sprayed or applied with a brush or a roll. It is not advised to use a paint gun as even on a low pressure setting it does not allow for a proper application.

ABBAmousses must be applied onto dry or slightly damp materials (morning dew) and with no risks of rain for at least half a day.

ABBAmousses must not be rinsed off in order to keep its long lasting action. It is the rain which will then reactivate its action in time.

However, in case of strong proliferation of mosses and lichens, it is advised to apply a heavy amount of product on these plants and once they start to become yellow in colour it will help to use a brush or a broom to remove the dead plants; it is advised to then apply a new coat of product.

PACKAGING

- 2 litre bottle
- 10 litre bottle
- 25 litre drum
