

ABBA mousses Plus

Ready-to-use product

▶ **Against : Mosses - algae - lichens - red traces**

▶ DESTINATION

ABBAmousses Plus is a technical evolution of **ABBAmousses**.

ABBAmousses Plus is based on a fungicide, bactericide and algacide vegetable-based active principle.

ABBAmousses Plus possesses the same basic properties as **ABBAmousses** but it also associates the waterproof function to the curative and preventive anti-cryptogamic qualities of **ABBAmousses**.

With its unique conception, **ABBAmousses Plus** acts in two stages once applied :

- 1° Decontamination of the material
- 2° Long lasting water-proofing

ABBAmousses Plus is designed to fight against mosses, algae, lichens, and to protect porous material on roofs and front walls.

ABBAmousses Plus can be sprayed or applied by brush on a basis of 3 to 5 m² per litre depending on the porosity of the material.

► APPLICATION FIELD

ABBAmousses Plus is specially adapted to be used onto absorbent materials such as tiles, fibre-cement tiles, cement tiles, terracotta...and on walls and front walls (stone, mass tinted rendering or rough rendering, bricks, wood...)

► PRESENTATION

One single product >>> one single application = 2 action treatments

ABBAmousses Plus is an aqueous product without any side effects on the materials it is applied to.

Once absorbed by the material, the anti-mosses effect of **ABBAmousses Plus** begins. The waterproof effect will only start 4 to 6 weeks later thanks to the high technical nature of this product which associates two complementary functions.

► HOW TO APPLY

ABBAmousses Plus can be sprayed or applied with a brush or a roll on a porous material. **ABBAmousses Plus** must be applied onto dry materials and with no risks of rain for at least half a day.

It might be helpful to sweep or brush the floor before applying **ABBAmousses Plus** especially in case of abundant proliferation of the vegetation.

The parts which are not destined to be treated must be protected, as well as the non-absorbent materials (glass, plastic, metal, bitumen,...). In the event of unexpected projection, rub with a rag dampened with water.

► PACKAGING

- 2 litre bottle
- 10 litre bottle
- 25 litre drum
