

ABBAstop

Ready-to-use product

▶ Invisible waterproofing of porous materials

▶ DESTINATION

ABBAstop is designed to waterproof walls and roofs' surfaces.

ABBAstop prevent water (liquid form) to penetrate into the material while leaving the surface free to breathe. Gases are not blocked out.

ABBAstop is very easy to use with a spray or a brush on an average basis of 1 litre for 3 to 5 m² depending on the absorption level of the surfaces. Please note that the product must be generously applied.

▶ SCOPES OF USAGE

ABBAstop can be applied onto porous surfaces, for example :

Roofs : tiles terracotta, fibre cement or slate sheets, and other naturally absorbent surfaces.

Walls : Rendering, stonework, brickwork...

▶ PRESENTATION

ABBAstop is a colourless aqueous product.

When applied onto materials, **ABBAstop** ensures an invisible protection against water without the formation of film.

ABBAstop allows the surface to be more resistant in time to frost and dirt.

ABBAstop is exclusively designed to be applied onto vertical or slanted surfaces and it is not suitable for using onto horizontal surfaces (patios, floor tiles...), for this effect we advise that you use **ABBAzol Waterproof** or **ABBAzol Water-Oilproofing**, please see booklet.

▶ HOW TO APPLY

ABBAstop must be applied to clean and stable surfaces with a spray, a brush or a roll. It is preferable to apply the product vertically from bottom to top.

ABBAstop must be applied generously in one thick coat.

ABBAstop can be painted over, the paint must be of good quality, i.e. (pliolithe) paint (it is recommended that you carry out a test prior to starting the work).

Avoid projection on the surfaces which are not meant for treatment (glass, metals, plastics...) and protect them during the application.

In the case of accidental projection, wipe off the product with a cloth or sponge and water.

▶ PACKAGING

- 2-litre bottle
- 10-litre bottle
- 25-litre drum
